

Player Identity

- **Name** – Player name (DK slate name)
 - **PlayerID** – NBA player ID (used for logs / tracking)
 - **Team** – Team abbreviation
 - **Position** – DraftKings position eligibility
 - **Salary** – DK salary
-

Projection Core

- **Projection** – Final DFS-ready mean projection (post shrinkage + realism caps)
 - **RawProjection** – Base projection before matchup / vegas multipliers
 - **Projection_bc** – Bias-corrected projection (used as center for floor/ceiling math)
-

Minutes & Usage

- **FP_per_min** – Fantasy points per minute from recent games
 - **ProjMin** – Projected minutes (injury & rotation adjusted)
 - **Multiplier** – Matchup × Vegas multiplier applied to scoring rate
 - **MinRisk** – Minutes uncertainty risk (higher = less stable minutes)
-

Availability

- **InjuryStatus** – Player injury designation (OUT / Q / None)
 - **Games** – Number of recent games used for stats
-

Volatility & Simulation

- **VolatilityTier** – LOW / MED / HIGH consistency classification
 - **Volatility_STD** – Std dev from Monte Carlo sims
 - **Volatility_STD_adj** – Volatility adjusted for minutes stability
 - **MC_Mean** – Mean result from Monte Carlo simulation
 - **Floor_MC** – Realistic floor (downside bound)
 - **Ceiling_MC** – Realistic ceiling (upside bound)
-

Upside Metrics

- **P_6x** – Probability of hitting 6× salary value
 - **P_8x** – Probability of hitting 8× salary value
 - **BoomScore** – GPP upside score (ceiling vs projection, salary-adjusted)
 - **BoomSalaryAdj** – Salary dampener on upside (expensive players penalized)
-

Cash Metrics

- **CashScore** – Mean projection vs volatility (safety metric)
- **ChalkRisk** – Risk of a chalk player failing (high own + low 6× chance)

Z-Score Components

(Used to normalize players across the slate)

- **z_proj** – Projection vs slate
- **z_value** – Projection per dollar vs slate
- **z_minutes** – Minutes vs slate
- **z_ceil** – Ceiling vs slate
- **z_base** – Base z used by volatility tier
- **z_pos** – Position-based ceiling adjustment
- **z_vol** – Final z multiplier for ceiling/floor

Ownership Modeling

- **SalaryBias** – Ownership bias from pricing psychology
- **OwnershipScore_Cash** – Cash ownership signal
- **OwnershipScore_GPP** – GPP ownership signal
- **OwnershipProb** – Modeled ownership probability
- **OwnershipPct** – Ownership % (normalized)
- **OwnershipPctDisplay** – Human-readable ownership %
- **Ownership** – Alias / legacy ownership value (if present)

Slate Context

- **PosScarcity** – How rare the position is on the slate
 - **SalaryCluster** – Whether salary falls on a common DK price point
 - **CliffBoost** – Projection “cliff” boost for top-tier scorers
 - **SalRank** – Salary percentile rank
 - **ProjRank** – Projection percentile rank
-

GPP-Specific Metrics

- **GPP_Alpha** – GPP leverage score ($\text{BoomScore} \times (1 - \text{Ownership})$)
 - **Leverage** – 8× upside relative to ownership
 - **GPP_Tier** – Final contest tier:
 - **Core** – High-upside, low-enough ownership anchors
 - **Secondary** – Strong tournament pieces
 - **Sprinkle / Mini-Sprinkle** – Correlated or low-exposure plays
-

How to Use This Practically

- **Cash builds:** sort by **CashScore**, low **Volatility_STD**, high **Ownership**
- **GPP builds:** sort by **GPP_Alpha**, **BoomScore**, **Ceiling_MC**
- **Leverage plays:** high **Leverage**, low **OwnershipPct**
- **Fade candidates:** high **OwnershipPct** + high **ChalkRisk**
